

IN THE CLAIMS

Cancel claim 1 and insert the following therefore:

--2. A wireless 3-in-1 anti-noise, radio, and sound-collecting device comprising:

a headphone structure having right and left ear cover speakers, a head band interconnecting said speakers, and a PCB installed in said device; said PCB having first, second and third circuit systems therein;

said first circuit system being an anti-noise circuit comprising a microphone for detecting noise, phase detection U-circuits coupled to said microphone and to each speaker and means for emitting a second wave of opposite phase to said noise, coupled to said speakers;

said second circuit system being a radio circuit system comprising an am/fm receiver, a U-circuit IC, a down converter circuit, a detect circuit, and a demodulator circuit;

said third circuit system comprising an external source audio input terminal, said demodulator circuit and said audio input terminal being coupled to said phase detecting U-circuits and to said speakers.--.
